

MINIATURE SCENERY

INSTRUCTIONS

INVERTIBLE BUILDING 7

PREPARATION

You will need:

- Cutting mat or something to protect your table.
- PVA/Wood glue or superglue if you prefer.
- Small file or sand paper.
- Small blade / hobby knife

GENERAL PROCESS

- Clear plenty of table space, you will need it.
- Parts should remove easily from the board by pressing through and popping them out. It's a good idea to cut through the tiny joins first though, and some parts (particularly smaller, more detailed parts) may need more careful persuasion.
- Use file or sand paper to remove the small bur caused by the connection to the frame.
- It's a good idea to familiarise yourself with how the pieces fit together before gluing.
- Slot the parts together as shown by the pictures below, applying glue wherever there is a connection. (unless shown otherwise)
- Parts may be a very tight fit, slight trimming or sanding of parts may be needed for ease of assembly.

IMPORTANT:

Do not glue floors
into buildings

These L shapes are designed to be FLIPPED in order to cover different table layouts. This means the top floor will also change.

Alternatively use only the middle floor OR don't use floors at all. It's up to you!

Don't like windows?

If you prefer to NOT have windows, do not pop them out of the walls.

We recommend running some thin glue around the window cut lines to support them.

Helpful Hint

If you DO pop out the windows. Use the spare rectangles to clear up any glue over run for nice clean corners.

Make x 2

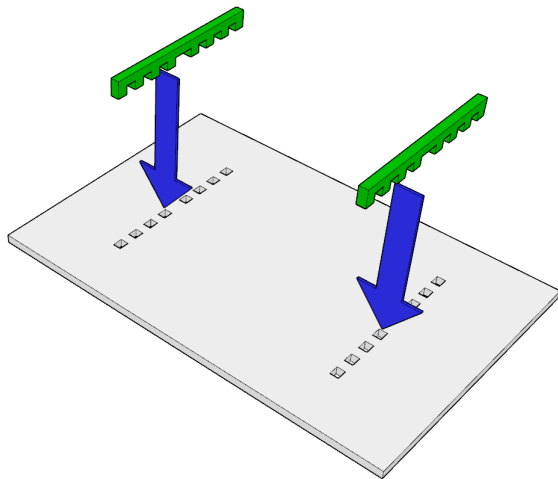

Do not glue floors
into buildings

Make x 2

Do not glue to
base

Walls, floors and scaffolding
can flip and turn to match
any building layout.

The two walls are designed to be used with the rest of the Invertible City Set seen below.
